

2SMS ENTERPRISE TEXT MESSAGING

Wireless applications that provide computer-to-mobile-phone text messaging for business.

A significant portion of today's workforce works outside the traditional office, which means employees are spending considerable time away from their desks. Companies have to adapt their communication systems and work processes to support their increasingly mobile workforces. For that reason, a growing number of workers have mobile phones that they use to keep in touch with their offices, ensuring that they stay connected and current with business operations.

2sms, a developer of enterprise messaging solutions, offers a text messaging solution that helps your workers, onsite and offsite, remain connected and in touch with your company's day-to-day operations. 2sms text messaging allows you to send text messages to multiple employees via their mobile phones or devices. Having 2sms text messaging in place helps keep your business connected to your mobile workers, ensuring that critical time sensitive messages can be acted upon quickly and efficiently.

2sms text messaging.

2sms text messaging enables companies to connect their business operations to their mobile phones and devices, helping them to improve business functions, respond more quickly to customer needs, and better respond to emergency situations. 2sms allows workers to send multiple text messages simultaneously from their computers or pagers to multiple mobile smartphones. Text messages can be sent to mobile phones, BlackBerry® devices, Windows Mobile® smartphones, and Palm® devices, both domestically and internationally.

Features:

- Messaging security and privacy
 - Only SMS messaging provider to be ISO 27001 certified.
 - 2sms privacy statement licensed by TRUSTe.
 - Systems subjected to biannual security penetration test, testing firewalls and other systems to ensure customer data is protected.
 - 2sms maintains certifications and authentication agreements with Microsoft®, IBM®, BEA, VeriSign, and other vendors to maintain security.
- Add-on software applications
 - 2sms solutions have 40 add-on software applications that help bridge the gap between corporate systems and the messaging network.
- Customer service
 - 2sms offer 24/7/365 live sales and technical support.

 - 2sms Secure SMS solution allows text messages of up to 3,500 characters to be sent to web enabled mobile phones with enhanced security.
- TeamData messaging
 - 2sms TeamData solution allows business customers to collect and publish data from any computer to wireless device anywhere in the world and vice versa.

"Unilever has used the 2sms offering for 3 years and the service has been extremely reliable. We have employed the SMS service on 5 of our intranet sites connected to our Active Directory. We used the XML services (<http://schema.2sms.com>) to integrate text messaging into our employee portal. This allows users to easily send messages across Europe whilst on the move. Currently its greatest use is for confirming travel arrangements and last minute meeting changes. At this sort of cost we expect our usage to grow over the next year. The feedback from users has been extremely favorable."

-Unilever-

"We rely on the service to deliver system initial notifications and regular progress updates of major system outages to senior account managers and other interested parties. We also use the system to alert and then confirm when the issues are resolved. We can use SMS as well as email within the same 2sms software. I can see from three desks away when the message status has gone from yellow (pending) to green (successfully delivered)".

Development tools	<ul style="list-style-type: none"> • Code Samples • XML • Web services • Support Forum

"We needed a simple to use and reliable service. We have service level agreements that we comply with and timely communication is key to that. We wanted to eliminate managers calling up the RST (Rolling Stock Technicians) for service information and distracting them from their role. 2sms understood our need for 100% reliability at two key times (07:00 and 17:00 hours) every day, when our service alerts are sent out."
